

At Your Fingertips

*Cutting-Edge Technology with
a Personal Touch*

In order to take advantage of the most advanced shipping and logistics technology many executives believe they must sacrifice personal service and ship with one of the large parcel companies. But with Axis Global Logistics you get the best of both worlds – personal attention and state-of-the-art-technology that can be customized to meet your specific requirements. Accessible via the Axis Global website at www.axisg.com, our technology solution allows customers real-time visibility and control throughout the shipping process and will speed-up delivery cycles and cut inventory and costs. This solution features:

Fast, User-Friendly Transportation Management

Our Axis-Trak transportation management system lets you create and track inbound and outbound shipments, generate air bill documentation and labels and even produce U.S. Customs documentation, including commercial invoices. Users can also create customized on-line reports such as real-time proof-of-delivery documents;

Inventory Management Via Our Cadence Fulfillment System

The Axis/Cadence inventory management system lets users locate and allocate inventory, search product catalogs, build and place orders, check order status and control min/max levels. The system also allows you to view images of stored inventory items and can be hyper-linked to your website so that your customers can order inventory directly;

Automatic Email and Faxes

Axis can automatically send you an email alert the moment your shipment arrives and can also send you customized email and fax alerts however and whenever you need them. What's more, we can customize reports to your exact specifications and automatically send them to you in a CSV spreadsheet format;

Paperless EDI Solution

Accuracy and visibility are the hallmarks of Axis' EDI solution. This paperless computer to computer communication cuts processing time and speeds the general flow of information. At the same time, this solution eliminates paper invoicing and errors due to manual data entry and misread faxes and allows you to instantly receive shipment status and costing updates. Axis supports EDI 214 codes, XML, and comma delimited formats;

Systems Integration

Axis can interface both shipment and logistics data directly to your Host system and also can interface with SAP, Oracle and JDE as well as other proprietary systems;

IT Partnership Solutions

We provide well-established IT formats and standards, but because we recognize that customers have differing capabilities we also provide IT partnership solutions ranging from consulting services to the development of newly customized, upgraded software applications;

Cisco Security

An integral part our security infrastructure, Cisco firewalls are placed between Axis' private networks and the Internet. Customers who access Axis web services must do so by using approved software and Internet gateways.

Our customized technology solutions and the personal service that comes along with them are literally right at your fingertips – as close as the computer on your desk.

Please contact us at your earliest convenience for a thorough discussion of your needs. We look forward to designing and implementing a technology solution that will boost your efficiency and cut your costs.
